Pancreatic cancer is currently the UK's 5th biggest cause of cancer death and is predicted to become the 4th biggest cause by 2026 as other cancers' survival rates continue to improve.

Each year in the UK nearly **10,000 people are diagnosed with pancreatic cancer**. The low survival rate has barely changed in almost 50 years and currently, 5 year survival is less than 7%.

With your help in raising funds and awareness of pancreatic cancer, we can make sure that more patients are diagnosed at an early stage so that they have the best chance of survival.

We save lives through early diagnosis
